Evidence Tracking System

Solve your Evidence Tracking challenges with DominateRFID!

- Bring accountability, accuracy and visibility to your evidence labeling and tracking.
- Dramatically reduce evidence source errors.
- User defined workflows ensure operational consistency and efficiency.
- Works with Barcode, RFID or combination of both.
- Use RFID handheld to audit, search and quickly find missing or misplaced evidence.
- Full historical tracking of every evidence from the point of collection to archiving and disposal.
- RFID mobile applications allow performing many functions in the field. Take to the crime scene, lab, property room, vehicles, courtroom and perform your duties, off-line or on-line.
- View evidence on the map of your facility or outdoor.
- Real-time Alert system with video surveillance alert you with unauthorized movement of evidence.
- Web based application accessible from anywhere.
- Check-in/out and Transfer-in/out with built-in paperless approval process.
- Attach unlimited digital evidence to each evidence and view physical and digital together.

In crime scenes, the collection and analysis of evidence is a crucial task for forensic professionals and investigators. Unfortunately, inefficiency in collecting, labeling, transporting, and tracking evidence is also common. These process inefficiencies can hurt the juridical system and impose unrepairable damages.

**Dominate Evidence Tracking** provides you with a solution to eliminate the source of process inefficiencies. Once a sample collection is tagged in the field, it is accounted for all the times. Fixed and mobile RFID readers can be placed at strategic locations along the evidence collection and delivery chain. As evidence move through one location to another, its location is automatically updated and the time of displacement is captured, thereby providing you with the movement history of any evidence. Multiple evidences can be associated with a single or multiple crime scenes and multiple evidence containers can be read at a time.

**Process Module**

The Process module allows users to define either static or dynamic routing for each process. In Static routing, all the steps are pre-defined and system will enforce the precise process flow. On the other hand, the Dynamic Process flow is a decision based process where the user will decide on the next step in the process for a particular evidence. Each process has Process Name, Location zone, Process Forecasted Time (the estimated time to be spent at each step), Process Instructions and finally a defined access level by Role or a specific user. Process Instructions provide the capability to add unlimited number of attachments as well as instructions for each step in the process.

This module allows you to know at any given moment what stage of the workflow a specific evidence is in, where it has been and where it should go to next. It also provides you with the actual time spent at each step and dwell time between steps. These can be measured against forecasted times to provide management with accurate Key Performance Indicators (KPI).
Evidence Tracking System

Track and view location of a variety of evidences on the map of your facility or property room. The powerful Alert system prevents unauthorized displacement of IT evidences and allows you to view video surveillance recordings of the movements. You will be notified via screen pop-ups, SMS and email. It can also trigger door locks, sound an alarm or turn on strobe light. You can view the incident in real time.

Check-in/out and Transfer-in/out
Through automated Check-in/out process, the system will associate evidence to each employee and will keep the complete chain-of-custody information as well as automatically emailing due date reminders. Using Transfer module, you will be able to securely transfer-in/out evidence to/from other facilities using paperless approval process.

Handheld RFID reader can be used to perform daily audits and use its audio and visual indicators to search and quickly find the missing or misplaced evidences.

Tablet or smart phone applications provide the mobility that is required to register new evidences, check-in/out, transfer-in/out and perform a variety of other functions in the field.

Security
Due to the sensitive nature of evidences, security is a crucial and integral part of this system. Special security layers have been designed to authenticate the user and eliminate abuse, unauthorized use or web attacks.

Dominate Evidence Tracking is a combination of a web-based application and a series of RFID mobile applications that delivers dramatic improvements in accuracy, productivity and cost savings. It can easily integrate with your Case Management System (CMS) or any other applications.

Not All RFID Solutions Are Created Equal
These are just the tip of the iceberg of what our solutions can do. When it comes to the functionalities required for a robust RFID-based Evidence Tracking solution, we literally thought of everything.
